SYSTEM ONE proudly introduces the first nano-engineered spray wax of its kind.

Gone forever are the days of laboriously applying paste wax and liquids that have to dry leaving a messy white residue.

From today onward, technology and 10 years of research allow SYSTEM ONE to apply carnauba wax in the form of a fine mist that can be gently wiped off. Protection lasts as long as the most expensive carnauba wax pastes and leaves an ultra high-gloss wet-look finish. The best part of all? No white residue stuck in the nooks and crannies!

This water-based, environmentally-

friendly product has no solvent aromas or fumes and can be applied in any temperature above freezing. Apply it on cold or hot surfaces, in the shade or in the sun. Anti-static additives repel dirt and dust.

It is simply to apply, safe to use and is particularly impressive on the most expensive custom-paint finishes. In fact, it is already being used by professional restorers on some of the world's most expensive collection of motorcycles and cars.

Apply wax to handlebars, fairings, fuel tanks, fuel lines, fenders, frame, headers, mufflers, tailpipes, air cleaner covers, coolant hoses, wheels, spokes, windshield and engine. Works on paint, chrome, stainless steel, aluminum, ABS, rubber and vinyl.

Detail your entire motorcycle with one product. Even add a layer of protection and a beautiful shine to your helmet and helmet shield!

Kit includes:

- 22-ounce spray bottle
- Microfiber Cloth
- Applicator Pad
