## Motorsports Products.

In the demanding world of motorsports, hearing protection is critical. Whether you're competing professionally or just using a motor vehicle for recreation, the damage on your hearing can be extreme unless you have adequate hearing protection. Wind noise and sustained high rev engine noise for long periods inflicts serious strain on your hearing.

## Hearing Protection.

Even if you wear a helmet, this will not protect your hearing sufficiently. Wind noise and engine noise at high speed are normally above 105db. Your hearing can only sustain a volume level of 115db for a maximum of fifteen minutes before damage occurs. But fortunately, with the use of high quality hearing protection, the noise level can be reduced, giving you a safe hearing period of over eight hours

[www.azearprotection.com](http://www.azearprotection.com) has a number of products to help you achieve the required level of hearing protection, ranging from custom molded ear plugs to a large variety of communication or music listening options.

## Standard Molded Ear Plugs

FLESH TONE

Standard Molded Ears plugs are super soft hydrophobic silicone earplugs that can be made of solid, or multi color. We can even take the time to outfit these molds with acoustical filters which will provide excellent protection against high level impulse noises ranging from 140-190dB. Making them excellent for speech recognition for motorcyclists, shooting enthusiasts and musicians.

They are produced in a large variety of brilliant solid colors, or colors can be mixed to produce swirls. We can even custom mold an ear piece for your cell phone or walkman headsets. This will give you greatly increased sound quality, and also allow you to listen at a lower volume, thus protecting your hearing even more.

## In-Ear Monitors

These IEMs deliver a quality of sound that is prized by professional musicians and discriminating audiophiles.

AZ Ear Protection's micro-technology delivers the true, high-fidelity reproduction of a sound studio with robust sound directly into your ear. The dual driver pro-monitor shells are laser-inscribed with each owner's name and an individual serial number that gets

digitally saved in our "Ears on File" program. Custom-fit earpieces provide unmatched comfort and secure fit with unique, low-profile styling and up to 26dB of sound isolation from ambient sounds for protection and enjoyment to meet the challenges discriminating audiophiles may experience in noisy, active lifestyle, extreme sport environments. In-Ear Monitors come in two lines single driver or dual driver.

AZ Ear Protection's IEMs are excellent for use in motor sport, exercise, aviation, snow boarding, cycling, mountain biking, extreme sports as well as all portable music devices, laptops and gaming. We think you'll agree that they deliver the best sound you've ever had.
